

Condition of the Month

JUNE

~DISC HERNIATION~

What is Disc Herniation?

Usually determined by Chiropractic examination and/or MRI, disc herniation is when discs in the spine bulge out from their proper place (shown by black arrow)

What symptoms does Disc Herniation cause?

Disc herniation can cause neck and low back pain, arm & leg pain, tingling in hands and feet and other serious symptoms.

What is Spinal Decompression Therapy?

Spinal Decompression Therapy is a non-surgical, comfortable traction therapy for relief of back and leg pain or neck and arm pain. During your treatment, by cycling through distraction and relaxation phases, and by proper positioning, a spinal disc can start to heal and go back to normal position.
